1/10 R/C HIGH PERFORMANCE 4WD OFF ROAD RACER

TAMIYA PLASTIC MODEL CO.
3-7, ONDWARA, SHIZUOKA-CITY, JAPAN.

RADIO CONTROL UNIT

Tamiya Adspec 2 channel R/C unit for 1/10, 1/12 scale R/C models is suggested for this model. The amplifier boosted speed control and receiver are combined in the C.P.R. unit (P100F) allowing easy installation. Other 2 channel R/C units using an electronic speed control can also be used (Model was not designed for a 2 servo installation).

RC-EINHEITEN

Die Tamiya Adspec 2 R/C Einheit ist für 1/10 und 1/12 Funkmodelle geeignet und wird auch für dieses Modell empfohlen. Der Fahrregler mit Nachverstärker und Empfänger sind in der C.P.R. Einheit (P100F) kombiniert und ermöglichen leichten Einbau. Andere 2-Kanal-Einheiten mit elektronischer Geschwindigkeitskontrolle können ebenfalls verwendet werden (Das Modell war nicht für den Einbau von 2 Servos entworfen worden).

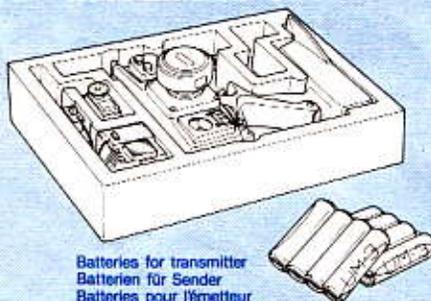

RADIOCOMMANDE

La radiocommande 2 canaux ADSPEC conçue pour les modèles R/C électriques au 1/10^e et au 1/12^e est vivement conseillée pour ce modèle.

Le variateur et le récepteur sont compris dans un même boîtier: l'unité C.P.R.; ce qui permet une installation et un accès plus aisés.

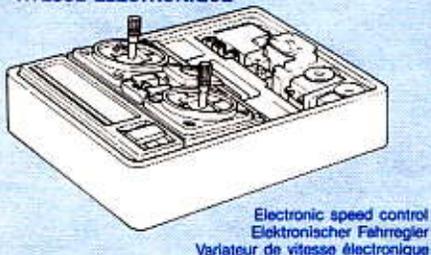

D'autres radiocommandes 2 canaux comprenant un variateur électronique peuvent également être utilisées (Ce modèle n'a pas été conçu pour l'utilisation de 2 servos).

WHEN USING THE ADSPEC R/C SYSTEM BEI VERWENDUNG DES ADSPEC R/C SYSTEMS EN UTILISANT L'ENSEMBLE ADSPEC

Batteries for transmitter
Batterien für Sender
Batteries pour l'émetteur

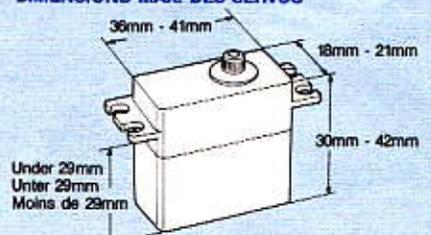

WHEN USING STANDARD 2 CHAN. R/C UNIT PLUS ELECTRONIC SPEED CONTROL BEI VERWENDUNG EINER NORMALEN 2-KANAL RC EINHEIT UND EINES ELEKTRONISCHEN FAHRREGLERS EN UTILISANT UN ENSEMBLE A 2 VOIES STANDARD, PLUS UN VARIATEUR DE VITESSE ELECTRONIQUE

Electronic speed control
Elektronischer Fahrregler
Variateur de vitesse électronique

SUITABLE SERVO SIZE GRÖSSE DER SERVOS DIMENSIONS MAX. DES SERVOS

POWER SOURCE

★ This kit is designed to use a Tamiya Ni-Cd 7.2V Racing Pack. Purchase it separately at your hobby supply house. Never dismantle or modify battery or charger. Charge batteries according to manual.

STROMQUELLE

★ Für diesen Bausatz benötigt man das Tamiya Ni-Cd 7,2V Racing Pack, das gesondert angeboten wird. Nie einen Akku oder ein Ladegerät umbauen oder ändern. Den Akku der Anweisung nach aufladen.

BATTERIE DE PROPULSION

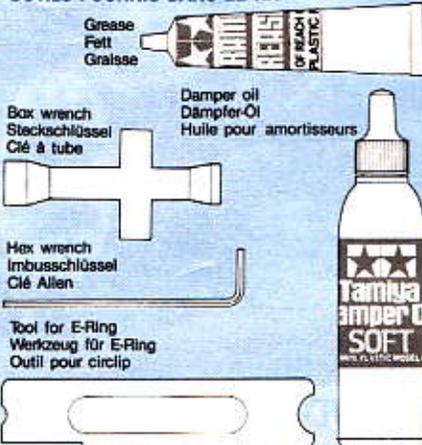

★ Le moteur qui équipe ce modèle peut être alimenté par une batterie Tamiya Ni-Cd 7,2 V. Racing. L'acheter séparément. Ne jamais pas démonter ou transformer la batterie ou le chargeur. Charger la batterie selon les indications du manuel.

COMPOSITION OF ADSPEC R/C SYSTEM ZUSAMMENSETZUNG DES ADSPEC R/C SYSTEMS COMPOSITION DE L'ENSEMBLE ADSPEC

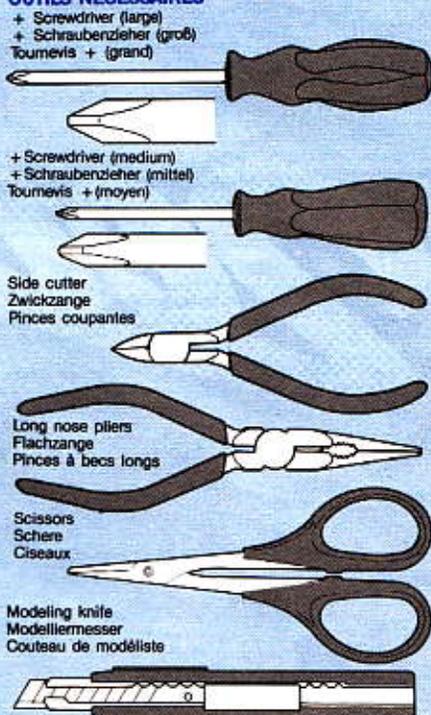

1. Transmitter: Serves as control box. Steering wheel and trigger movements are transformed into radio signals which are transmitted through the antenna.

1. Sender: Dient als Kontroll-Box. Lenkrad- und Hebel-Bewegungen werden in Funk-Signale umgeformt, die durch die Antenne übertragen werden.

1. Émetteur: Il sert à contrôler le véhicule. Les mouvements du volant et de la gâchette sont transformés en signaux qui sont transmis par l'antenne.

TOOLS REQUIRED BENÖTIGTE WERKZEUGE OUTILS NECESSAIRES

★ Tweezers and cellophane tape will also assist in construction. Painting is an important part in finishing your model. Refer to the latter pages of these instructions for painting details.

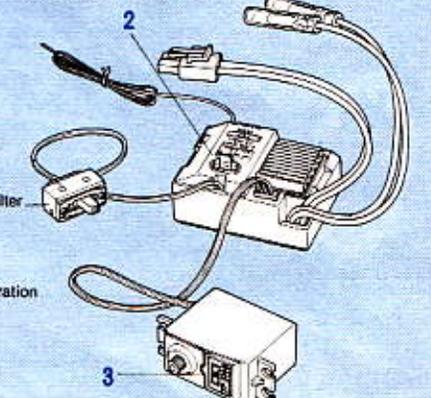

★ Pinzette und Tesafilm sind beim Bau sehr hilfreich. Das Lackieren ist ein wichtiger Punkt bei der Fertigstellung des Modells. Detailbemalung siehe nachfolgende Seiten.

★ Des précelles et du ruban adhésif seront également utiles durant le montage. La peinture est une opération très importante dans la finition d'un modèle. Se référer aux dernières pages de cette notice de montage pour les détails de peinture.

2. C.P.R. unit: The amplifier boosted speed control is combined with the receiver in this unit and obtains its power from the model's running battery. Some R/C units on the market have separate units for the electronic speed control and receiver.

2. C.P.R.-Einheit: Der mit Verstärker arbeitende Fahrregler ist mit dem Empfänger in dieser Einheit kombiniert und erhält den Strom vom Akku. Einige RC Einheiten, die am Markt erhältlich sind, haben getrennte Einheiten für den elektronischen Fahrregler und Empfänger.

2. Unité C.P.R.: Le variateur de vitesse et le récepteur sont contenus dans cette unité et sont alimentés par l'accu de propulsion.

3. Steering servo: Transforms signals received from the receiver into mechanical movements.

3. Lenker-Servo: Formt die Signale des Empfängers in mechanische Bewegung um.

3. Servo de direction: Il transforme les signaux électriques en mouvements mécaniques.

* There are many small screws, nuts and similar parts. Assemble them carefully referring to the drawings.

* This kit does not require liquid thread lock for assembly.

Apply grease to the places shown by this mark. Apply grease first, then assemble.

* Viele kleine Schrauben und Muttern etc. müssen genau der Anleitung nach eingebaut werden.

* Der Bausatz erfordert keine Schrauben-Sicherungs-Flüssigkeit.

Stellen mit diesem Zeichen erst fetten, dann zusammenbauen.

* Il y a beaucoup de petites vis, d'écrous et de pièces similaires. Les assembler soigneusement en se référant aux dessins.

* Ce modèle ne nécessite pas l'emploi de produit freine-filet pour son montage.

Graisser les endroits indiqués par ce symbole. Graisser d'abord, assembler ensuite.

**CAUTION ON THINNER AND LIQUID
THREAD LOCK**

All thinners attack plastic, even plastic model paints and thinners. Never dip parts into thinners or paint, nor wash them with thinners. This kit does not require liquid thread lock for construction.

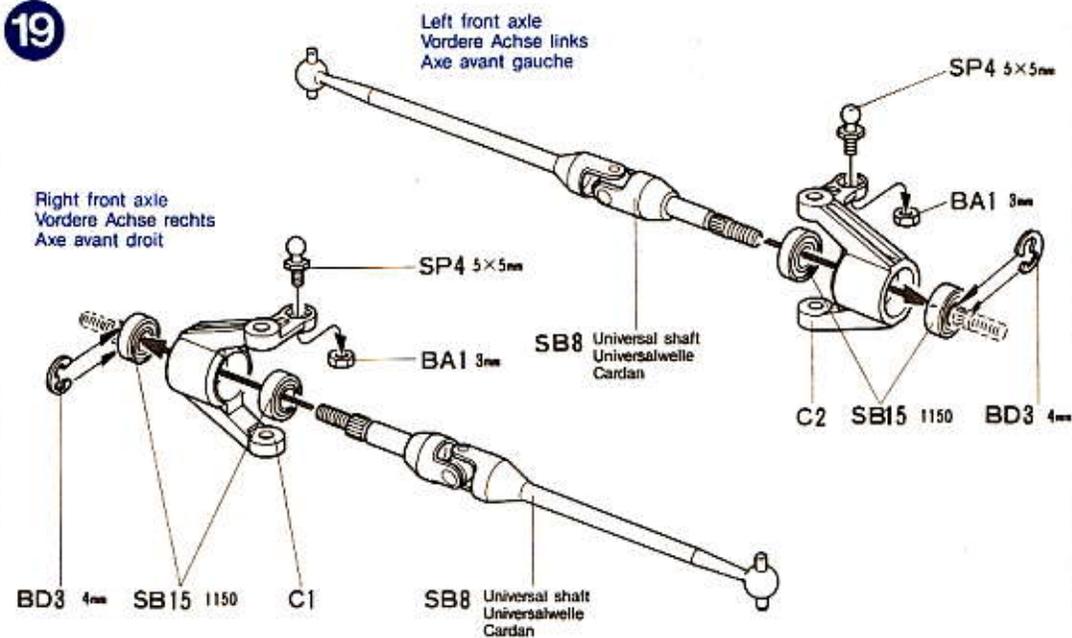

**VORSICHT MIT VERDÜNNERN UND
FLÜSSIGEN
SCHRAUBENSICHERUNGEN**

Alle Verdünner greifen Plastik an, selbst Plastikfarben und deren Verdünner. Niemals Teile in Verdünner oder Farbe tauchen. Der Bausatz erfordert keine Schrauben-Sicherungs-Flüssigkeit.

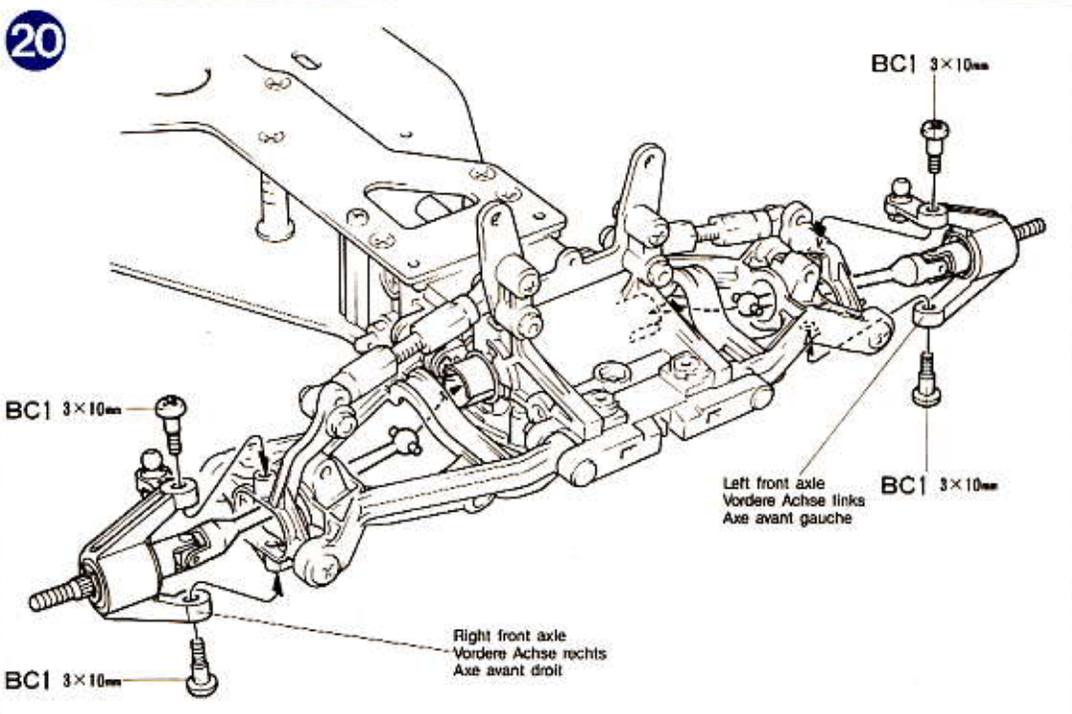

**PRECAUTIONS POUR LES SOLVANTS
ET LES PRODUITS FREINE-FILET**

Tous les solvants attaquent le plastique!.. Même les peintures et les diluants pour maquettes plastique. Ne jamais tremper les pièces dans du diluant ou de la peinture, ne jamais les nettoyer avec du diluant. Ce modèle ne nécessite pas l'emploi de produit freine-filet pour son montage.

STICKER

- 1 Cut stickers along colored edge so the transparent film is removed.
 - 2 Peel off the end of lining a little and put the sticker in position on the body.
 - 3 Then, remove the lining slowly. In so doing, be careful that the sticker does not move out of position on the body.
- If the lining is completely removed in advance, the sticker may be wrinkled or contain unwanted air bubbles.

**STICKER**

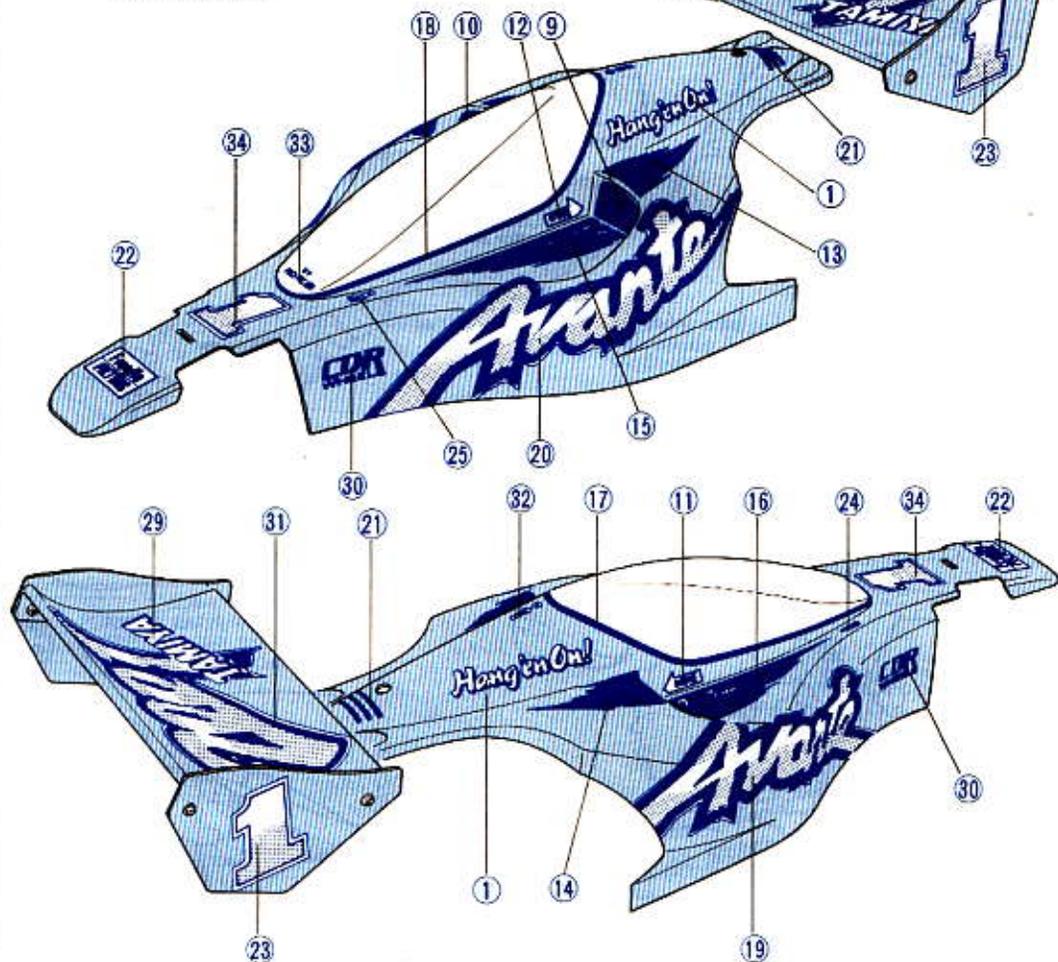

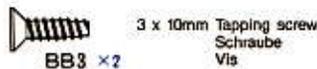

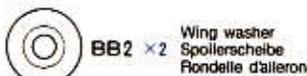

- 1 Die Sticker an den bunten Kanten so ausschneiden, daß der transparente Film weg ist.
- 2 An einer Kante die Unterlage etwas abziehen und Sticker richtig auf die Karosserie legen.
- 3 Dann die Unterlage langsam ganz abziehen, darauf achten, daß sich der Sticker nicht verschiebt und daß keine Luft unter den Sticker kommt — sonst gibt es Luftblasen. Wenn die Unterlage vorher komplett entfernt wird, kann der Sticker zusammenkleben.

MOTIF ADHESIF

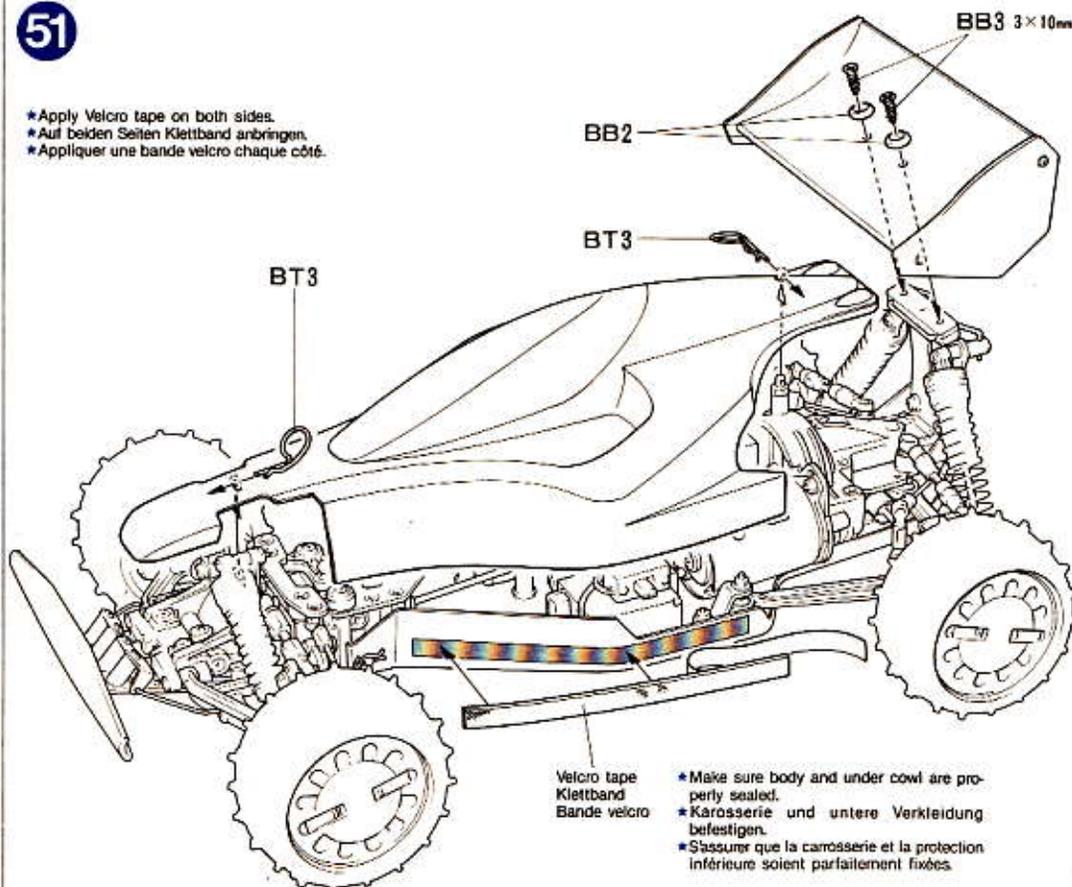

- 1 Découper chaque motif au plus près de ses contours pour éliminer le film transparent.
 - 2 Soulever le papier de protection à l'une des extrémités et positionner le motif sur la carrosserie.
 - 3 Retirer lentement le papier de protection en veillant à ce que le motif ne se déplace pas sur la carrosserie.
- En retirant entièrement à l'avance le papier de protection, le film risque de former des plis ou de retenir des bulles d'air indésirables.

50**MARKINGS

Bande velcro

- ★ Make sure body and under cowl are properly sealed.
- ★ Karosserie und untere Verkleidung befestigen.
- ★ S'assurer que la carrosserie et la protection inférieure soient parfaitement fixées.

**TAMIYA COLOR FOR
POLYCARBONATE**

This is a paint to do a fine job on polycarbonate bodies of RC cars. It can be brushed or sprayed and brushes can be cleaned with water. 18 colors are available. It is collision resistant and durable.

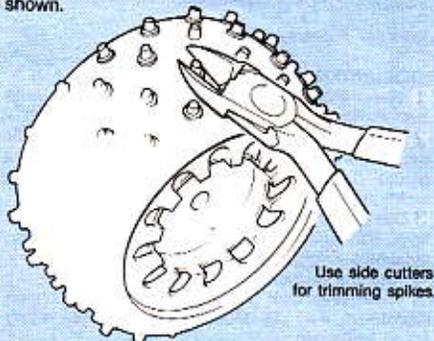

SETTING-UP THE AVANTE 2001

To greatly enhance the overall performance of your car, it is necessary to tune the vehicle to the track (and its surface conditions), on which you will be racing. This will ensure its best performance on race day. Make adjustments referring to the instruction manual, keeping in mind that "balance" is the key word.

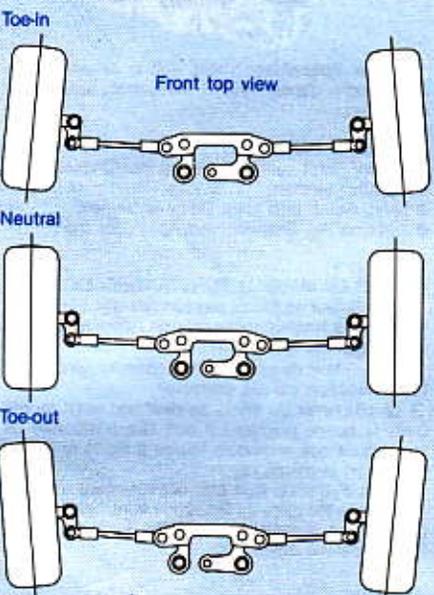

1. TIRES

Tires have a great influence on the performance of the car, and are normally the first components tuned. The stock high-grip pin spike tires can be easily modified for a soft track surface or hard track conditions by shortening the height of the pins by trimming. This helps the tires provide the best traction for improved acceleration and handling.

When the car understeers, trim spikes on front tires for hard surfaces; and use long spiked front tires for soft surface running. Do the opposite if the car oversteers. It is suggested that you make-up several sets of tires with different spike lengths, in order to have the right choice of tires at the track. Worn spike tires can regain proper grip by trimming spike tips as shown.

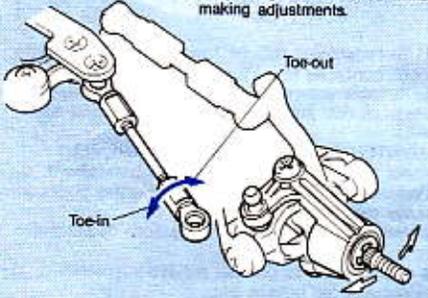

2. TOE-IN AND TOE-OUT

Adjusting the car to toe-in a little, by pointing the wheels inwards, provides the car with good straight

How to adjust.

* Temporarily remove tie-rod while making adjustments.

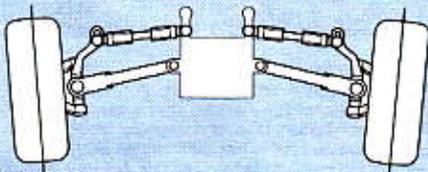

running and moderate steering characteristics. Toe-out adjustments, which point the front wheels outwards, allows sharp and crisp steering. Take care not to overdo any adjustment, otherwise the resulting drag will hinder the handling of the car. Too much of either reduces performance and control. Begin with a little toe-in and work from there.

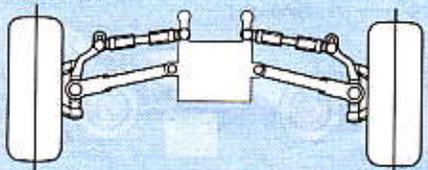

3. CAMBER ANGLE

While taking the corners, the car is forced to go outwards, causing in-stability. The area of contact on each tire is determined by the camber angle, and therefore the traction of the tires can be made greater or lesser through adjustment of the camber angle. To increase traction during cornering adjust camber angle to negative, and for reducing traction, adjust to positive. The steering characteristics can be changed by altering the traction of the front and rear tires. The car can be made to oversteer with the front adjusted to negative camber and the rear to positive. To cause the car to understeer, adjust front to positive camber and rear to negative.

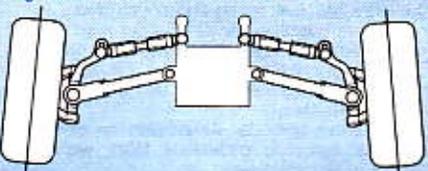

Positive camber

Zero camber

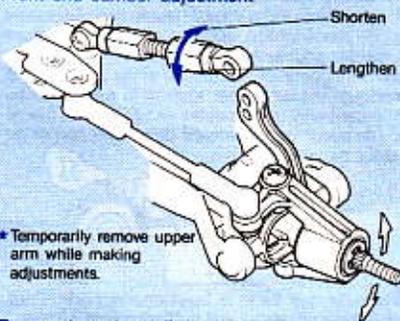

Negative camber

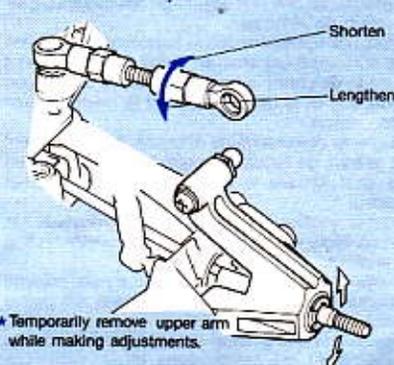

* The vehicle is adjusted to the required camber angle, when assembled according to the instruction manual, but it is suggested to later adjust it to your own preference and track conditions. Lengthen the upper arm for positive camber and shorten for negative camber angle.

Front end camber adjustment

* Temporarily remove upper arm while making adjustments.

Rear end camber adjustment

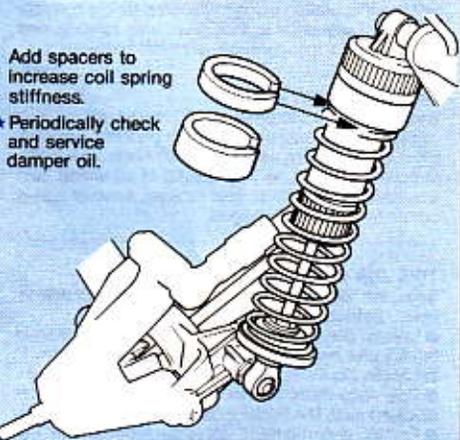

* Temporarily remove upper arm while making adjustments.

4. DAMPER

It is suggested that you first assemble the damper units to standard, as described in the instruction manual, and test run the car. If the car understeers, make the front dampers softer and the rear harder. For oversteering traits, make the front dampers harder and the rear softer. Also, you can reduce car dividing tendencies during jumps by setting the front dampers hard and the rear soft. The damper units should always be adjusted to maintain a balance between the front and rear end. Excessive damping only makes the car more difficult to control.

Add spacers to increase coil spring stiffness.

* Periodically check and service damper oil.

* Damper oil also plays a very important part in enhancing overall suspension potential. Use of different types of oil enable you to adjust your damper units for any track conditions. Remember to periodically check and service damper oil to maintain performance.

5. GEAR RATIO

Selecting the right gear ratio is very important in achieving good results in official four-minute off road races. Proper gear ratio should be determined by the available output power of the motor; type of battery; track condition and layout. The standard gear ratio set-up for the Avante 2001, when using a Tamiya 7.2V-1700mAh Racing Pack EX battery is: 20 tooth pinion gear with the Technigold Motor; 18 tooth pinion gear with the Dynatech 01R Motor; and 14 tooth pinion gear when using the Dynatech 02H Motor. It should also be noted that running the car on a good grip surface suggests use of a pinion gear 1 - 2 teeth smaller, in order to effectively use all of the available battery power.

SAFETY PRECAUTIONS

Follow the outlined rules for safe radio control operation.

- Avoid running the car in crowded areas and near small children.
- Never use the street for running R/C models.
- Never hinder rotation of wheels, nor attempt to run model when it is stuck.
- Make sure that no one else is using the same frequency in your running area. Using the same frequency at the same time can cause serious accidents, whether it's driving, flying, or sailing.

R/C OPERATING PROCEDURES

1. Set model on a box so wheels are free to rotate.
 2. Install/connect running and transmitter batteries.
 3. Make sure the transmitter controls and trims are in neutral.
 4. Switch on transmitter.
 5. Switch on receiver.
- ★ Inspect operation using transmitter before running.
★ Reverse sequence to shut down after running, and make sure to disconnect/remove all batteries.

HANDLING CAUTIONS

Because an electric powered R/C model utilizes high capacity Ni-Cd batteries and high performance electric motors, current as large as 200 watts flow in the circuits. You must be very careful of all wiring, and adjustments, otherwise your receiver, servo or speed controller can be damaged.

INSPECTION BEFORE OPERATION

Be sure to check the points shown in the figure before starting operation. This is necessary to prevent trouble and accidents. In the first operation after assembly, let the model run slowly for the first 5 minutes while checking the condition of the steering and speed control.

- 1 Make sure that screws, particularly grub screws are tight enough.
- 2 Make sure that batteries for the transmitter are fully charged or new by means of meter.
- 3 Make sure that Ni-Cd battery has been sufficiently charged. If Battery is not charged, car may run out of control if the receiver and motor use the same battery.
- 4 Adjust steering servo and/or trim so that the car tracks in a straight line with the transmitter at neutral.
- 5 Double check speed controller for neutral position. Improper adjustment can result in a run away model.
- 6 Double check the wiring for breaks and short circuits.
- 7 Be sure to apply grease to bearings, and moving portions of suspension, etc.

TROUBLESHOOTING

- 1 If the motor does not function (a rare occurrence), remove wires and check the motor by directly connecting its lead wires to a fresh battery.
- 2 Is the speed controller adjusted properly? Is wiring done properly? Read through manual included with your electronic speed controller unit.
- 3 Is the servo horn in the proper position? It must be fitted so that the model turns right and left the same amount.
- 4 Antenna must be adjusted correctly.
- 5 When shafts or wheels become entangled, motor will overheat. Remove such hindrances immediately.

- 6 If the radio control unit is not satisfactory, inquire with the manufacturer. The radio is very precisely constructed and must be handled with great care.

MAINTENANCE AFTER RUNNING

After operating the model, perform the following to maintain optimum performance.

- Completely remove sand, mud, dirt, etc.
- Apply grease on the suspension, gears, bearings, etc.

TIPS ZUR SICHERHEIT

Beachten Sie die folgenden Richtlinien für fehlerfreien Betrieb.

- Lassen Sie das Fahrzeug nur in freiem Gelände fahren und nicht in der Nähe von Kleinkindern.
- Lassen Sie Ihr Auto niemals auf der Straße fahren.
- Das Auto nicht fahren lassen, wenn die Räder blockiert sind. Die Räder müssen sich immer drehen.
- Prüfen, daß niemand dieselbe Frequenz in der Umgebung benutzt, denn dadurch können Unfälle entstehen - sowohl beim Fahren, Fliegen oder Segeln.

KONTROLLEN VOR DER FAHRT

1. Setzen Sie das Modell so auf einen Kasten, daß sich die Räder frei drehen können.
 2. Die Fahrakku und Sender-Batterien einbauen/verbinden.
 3. Darauf achten, daß Empfänger-Trimmung in Neutralstellung ist.
 4. Sender einschalten.
 5. Empfänger einschalten.
- ★ Die Funktion vor Abfahrt mit dem Sender überprüfen.
★ Nach Spielbetrieb in umgekehrter Reihenfolge vorgehen und die Batterien herausnehmen bzw. abklemmen.

BITTE BEACHTEN!

Ein ferngesteuertes Auto mit Elektro-Motor braucht viel Strom und einen Motor mit großer Leistung. Bis zu 200 Watt! Alle Verdrahtungen, Einstellungen und der Fahrregler müssen vorsichtig gehandhabt oder sicher eingebaut sein, sonst können Empfänger, die

Servos oder der Fahrregler beschädigt werden.

KONTROLLEN VOR DER FAHRT

Führen Sie bitte unbedingt die Kontrolle gemäß den nachstehenden Punkten durch, bevor Sie das Auto fahren lassen. Dies ist notwendig, um Probleme und Unfälle zu vermeiden. Beim ersten Betrieb nach dem Zusammenbau lassen Sie das Auto die ersten 5 Minuten langsam fahren und prüfen Sie die Lenkung und Fahrregler.

- 1 Prüfen, ob die Schrauben, besonders die Gewindestifte, fest genug angezogen sind.
- 2 Sind die Batterien für den Sender frisch?
- 3 Sind die Ni-Cd-Akkus voll geladen? Wenn die Akkus nicht voll geladen sind, kann das Fahrzeug außer Kontrolle geraten, falls Sender und Motor dieselbe Batterie benutzen.
- 4 Lenk-Servo und/oder Trimmhebel so einstellen, daß das Fahrzeug geradeaus fährt, wenn der Sender in Neutralstellung ist.
- 5 Sehr genau prüfen, ob Fahrregler in Neutralstellung ist. Ungenaue Einstellung kann dazu führen, daß das Fahrzeug unkontrolliert davonfährt.
- 6 Kabel gut isolieren, um Kurzschluß zu vermeiden.
- 7 Die Lager einfetten und ebenso die beweglichen

Teile der Aufhängung.

STÖRUNGEN UND URSACHEN

- 1 Wenn Motor nicht läuft, evtl. direkt an Batterie zum Prüfen anschließen.
- 2 Ist der Fahrregler genau eingestellt? Sind die Kabel genau gelegt? Die Anweisung nochmals genau durchlesen, auch die Anleitung für den elektronischen Fahrregler.
- 3 Das Servohorn überprüfen. Es muß so eingebaut sein, daß links und rechts gleichmäßiger Kurveneinschlag erfolgt.
- 4 Antenne ausrichten.
- 5 Wenn Gras oder Steinchen die Antriebsachsen blockieren, wird der Motor überhitzt. Blockierung sofort entfernen.

- 6 Wenn Funkanlage nicht richtig arbeitet, zum Fachhändler gehen - NICHT versuchen, SELBST zu reparieren.

NACH DEM FAHREN

Nach der Fahrt sollten folgende Wartungsarbeiten ausgeführt werden.

- Sand, Staub und allen Dreck entfernen.
- Aufhängung, Getriebe und Achslager ölen.

MESURES DE SECURITE

Veuillez trouver ci-dessous les règles de sécurité à respecter pour l'utilisation de votre ensemble R/C.

- Evitez de rouler avec votre voiture dans un endroit où il y a beaucoup de monde ou encore fréquenté par des enfants.
- Ne roulez jamais sur la route.
- Evitez de bloquer la voiture contre un obstacle, ce qui empêcherait la rotation des roues.
- Assurez-vous que personne d'autre n'utilise la même fréquence sur le même terrain que vous. Utiliser la même fréquence en même temps peut être source de sérieux accidents, pendant la conduite, le vol ou la navigation des modèles R/C.

PROEDURE DE MISE EN MARCHÉ

1. Assurez-vous de la libre rotation de la transmission du véhicule.
 2. Installez les batteries dans l'émetteur.
 3. Assurez-vous que les trims soient au neutre.
 4. Allumez l'émetteur.
 5. Allumez le récepteur.
- ★ Vérifiez la bonne marche de votre radiocommande avant de rouler.
★ Faites les opérations inverses après utilisation de votre ensemble R/C. Assurez-vous que les batteries soient bien débranchées et rechargez-les.

PRECAUTIONS

Du fait qu'une voiture R/C électrique utilise un moteur de hautes performances alimenté par une batterie de forte capacité, un courant d'environ 200 Watts traverse les circuits. Il convient donc de réaliser tous les câblages et de régler le variateur de vitesse avec le plus grand soin, autrement le récepteur, les servos ou le variateur peuvent être endommagés.

VERIFICATION AVANT ESSAIS

Vérifier les points indiqués sur l'illustration ci-dessous avant de procéder aux essais. Ces opérations sont importantes pour éviter les pannes et les accidents. La première opération à effectuer après avoir terminé le montage est de laisser tourner le moteur lentement durant environ 5 minutes en vérifiant en même temps le bon fonctionnement de la direction et du variateur de vitesse.

- 1 S'assurer que toute la boulonnerie, particulièrement les vis pointeau, est soigneusement serrée.
- 2 S'assurer du bon état de charge des batteries d'alimentation de l'émetteur.
- 3 S'assurer également que la batterie de propulsion a été suffisamment chargée, dans le cas contraire une perte de contrôle peut se produire du fait que la réception et le moteur utilisent la même source d'alimentation.
- 4 Régler la commande de direction, éventuellement avec le trim, de façon à ce que la voiture roule en ligne droit lorsque le manche est au neutre sur l'émetteur.
- 5 Double vérification du neutre du variateur. Un mauvais réglage peut provoquer une détérioration du variateur.
- 6 Vérifier soigneusement le câblage pour prévenir les ruptures ou les court-circuits; isoler les points douteux avec du ruban adhésif.
- 7 Appliquer de la graisse sur les paliers, les points de pivotement des suspensions, etc...

CAUSES DE MAUVAIS FONCTIONNEMENT

- 1 Si le moteur ne tourne pas (un cas rare...) le déconnecter et le tester directement en l'alimentant avec une pile neuve.
- 2 Le variateur de vitesse est-il correctement réglé? La connection est-elle correcte?
- 3 Le palonnier du servo de direction est-il monté dans la bonne position? Il doit être positionné de façon à ce que le modèle tourne à droite et à gauche selon le même rayon.
- 4 Le fil d'antenne doit être correctement disposé.
- 5 Lorsque les axes ou les roues sont freinés dans leur rotation, le moteur surchauffe. Retirer immédiatement pareils obstacles.

- 6 Si l'ensemble R/C ne fonctionne pas correctement, contacter le S.A.V. du fabricant. Un ensemble de radiocommande est fabriqué avec une haute précision et doit être manipulé avec un grand soin.

MAINTENANCE APRES FONCTIONNEMENT

Après chaque séance de fonctionnement du modèle, effectuer les opérations suivantes pour conserver des performances maximum.

- Nettoyer entièrement les projections de poussière, de sable, de boue, etc...
- Appliquer de la graisse sur les suspensions, la pignonerie, les paliers, etc...
