# BUILD THE

# MERCEDES-BENZ W196

## Guide to the instructions

This set of step-by-step instructions will enable you to complete the build of your **1:8-scale Mercedes-Benz W196**. The only tool you will need is a screwdriver. Most of the steps involve simply screwing or fitting parts together, and the correct screws needed for each step are clearly labelled on the instructional images.

### Please note the following:

- Where left and right elements of the same part are supplied, these are listed as (L) and (R).
- Close-up details of steps are framed in yellow.
- You will not be using every part you receive in your shipment in that build section. Keep any parts that are not used aside for use in a later sequence.
- You will receive extra screws with each shipment in case any screws are lost or broken.
- Screws with codes ending in the letter M drive into metal; those ending in the letter P drive into plastic.
- With M screws, first drive the screw in half-way. Then unscrew it to release the shavings created as the screw cuts its thread. Finally, drive the screw fully into the socket. M screws should be tightened so the head makes firm contact with the fixing surface.

- With P screws, do not over-tighten them as they can damage the socket.
- When working with the pre-finished exterior surfaces of the model, work on a soft cloth. This will protect against scratching the paintwork.
- When plugging wires in, ensure the power is switched off.
- Tweezers can be used to fit the PVC cables. In this case, grip carefully around 5mm from the end of the cable. If the end of the cable is too narrow to fit on to the pin, cautiously insert a cocktail stick, being wary not to split the cable.
- Some smaller plastic parts are attached to sprues. You can remove these by hand, or by careful use of a cutting implement such as a scalpel.
- When assembling the wheels of your model, you can choose between regular and easy assemblies. Follow our instructions carefully.

The Mercedes-Benz W 196 R designed for the 1954 season met all the demands of the new Grand Prix formula decreed by the sport's governing body, the CSI (Commission Sportive Internationale): a capacity of 750 cc with or 2500 cc without supercharger, free choice of gas mixture, a racing distance of 300 kilometres or a minimum of three hours. The streamlined version was completed first because the Reims

Der für die Saison 1954 konstruierte Mercedes-Benz W 196 R erfüllt alle Bedingungen der neuen Grand-Prix-Formel der CSI (Commission Sportive Internationale): Hubraum 750 Kubikzentimeter mit oder 2500 Kubikzentimeter ohne Kompressor, beliebige Zusammensetzung des Treibstoffs, Renndistanz 300 Kilometer, mindestens jedoch drei Stunden. Zuerst fertig gestellt wird die Stromlinien-Version, weil das Auftaktrennen in Reims sehr

a Mercedes-Benz W 196 R, conçue pour la saison 1954, répondait à toutes les exigences de la nouvelle formule du Grand Prix décrétée par l'instance dirigeante du sport, la CSI (Commission Sportive Internationale) : une capacité de 750 cm<sup>3</sup> avec ou 2500 cm<sup>3</sup> sans compresseur, libre choix du mélange de gaz, une distance de course de 300 kilomètres ou un minimum de trois heures. La version simplifiée a été complétée en premier parce que la course de Reims qui

race kicking off the season permitted very high speeds. After that there was also a version with exposed wheels.

Fritz Nallinger was in charge of the project as a whole, ably assisted by Rudolf Uhlenhaut, Chief Engineer of the racing department since 1 September 1936, and after the war also head of the Car Testing department, who influenced the development decisively. And although, yet again, in the case of the W 196 R, the whole was much more than the sum of its parts, every component is worth mentioning: cutting-edge technology in terms of its era, in spite of the fact that, in some cases, there had been precedents in the history of motor sports. This silver masterpiece, of which 14 units including a prototype were built, drove its competitors to despair in the following two years. Its original streamlined body was both expedient and visually appealing. From the European Grand Prix on the Nürburgring in early August 1954 onward, however, an open-wheel (monoposto) version also formed part of the line-up. Its tubular space frame was light and sturdy, its suspension with torsion bars and a new single-joint swing axle at

hohe Geschwindigkeiten zulässt. Danach gibt es noch eine Variante mit freistehenden Rädern.

Mit der Leitung des Projekts betraut ist Fritz Nallinger. Maßgeblich die Entwicklung beeinflusst Rudolf Uhlenhaut, seit dem 1. September 1936 Technischer Leiter der Rennabteilung und nach dem Krieg zudem Leiter der Pkw-Versuchsabteilung. Und obwohl im Falle des W 196 R einmal mehr das Ganze viel mehr ist als die Summe der Teile, ist jedes Element der Rede wert, damalige Technologie vom Besten – auch wenn sich gelegentlich in den Tiefen der Vergangenheit Präzedenzfälle finden. Das Meisterstück in Silber, gefertigt in vierzehn Exemplaren inklusive eines Prototyps, lässt in den nächsten beiden Jahren die Konkurrenz verzagen. Der ursprüngliche Stromlinienaufbau ist zweckmäßig und schön zugleich, allerdings wird ab dem Großen Preis von Europa auf dem Nürburgring Anfang August 1954 eine Version mit frei stehenden Rädern (Monoposto) zur Standardausrüstung. Der Gitterrohrrahmen ist leicht und stabil, das Fahrwerk mit Drehstab-Aufhängung und einer neuen Eingelenk-Pendelachse hinten sowie riesigen turbogekühlten,

débutait la saison permettait des vitesses très élevées. Après cela, une version avec des roues apparentes a également été construite.

Fritz Nallinger était en charge du projet dans son entier, habilement assisté par Rudolf Uhlenhaut, ingénieur en chef du département des courses depuis le 1er septembre 1936 et, après la guerre, également chef du département des essais des voitures, qui a contribué de manière décisive au développement. Et bien que, encore une fois dans le cas de la W 196 R, l'ensemble était bien plus que la somme de ses parties, chaque composant mérite d'être mentionné : c'était la technologie de pointe pour cette époque, bien qu'il y avait eu, dans certains cas, des précédents dans l'histoire du sport automobile. Ce chef-d'œuvre argenté, dont 14 exemplaires y compris un prototype ont été construits, a poussé ses concurrents au désespoir au cours des deux années suivantes. Sa carrosserie aérodynamique originale était à la fois opportune et visuellement attrayante. À partir du Grand Prix d'Europe au Nürburgring au début du mois d'août 1954, une version à roues ouvertes (monoplace) fait également partie de l'équipe. Son cadre spatial tubulaire était léger et robuste, les suspensions avec des barres de torsion et un

the rear as well as the giant, turbo-cooled, and at first centrally arranged Duplex drum brakes were unconventionally good. The eight-cylinder in-line engine with direct injection and desmodromic valve control (1954: 256 hp (188 kW) at 8260 rpm, 1955: 290 hp (213 kW) at 8500 rpm) was installed into the space frame at an angle of 53 degrees to the right to lower the centre of gravity and reduce the frontal area. What's more, meticulous preparations for each individual race harked back to the glorious 1930s while at the same time anticipating the modern Formula One approach. But there was something else as well: so as to have the best cars in the world raced by the best drivers, racing manager Alfred Neubauer hired the – initially reluctant – superstar Juan Manuel Fangio, plus the up-and-coming Stirling Moss in 1955 – a virtually invincible pairing.

The W 196 R's track record was impressive indeed: nine victories and fastest laps, as well as eight pole positions in the twelve Grand Prix races in which it was entered, and, of course, Fangio's world champion's titles in 1954 and 1955. There was little room for improvement.

zunächst innen mittig untergebrachten Duplex-Trommelbremsen unkonventionell gut. Der Reihenachtzylinder mit direkter Einspritzung und desmodromisch gesteuerten Ventilen (1954: 256 PS/188 kW bei 8260/min, 1955: 290 PS/213 kW bei 8500/min) ist im Winkel von 53 Grad nach rechts geneigt in das Rahmenfachwerk eingebaut, um den Schwerpunkt abzusenken und die Stirnfläche zu verkleinern. Dazu kommen die minutiöse Vorbereitung und Durchführung des Projekts Grand Prix im Zeichen des Stuttgarter Sterns, die einerseits an die ruhmreichen 1930er Jahre erinnern und zugleich die Formel-1-Moderne vorwegnehmen. Und noch etwas: Damit das beste Fahrzeug auch vom besten Fahrer gesteuert wird, hat Rennleiter Alfred Neubauer den anfänglich widerstrebenden Top-Lenker Juan Manuel Fangio engagiert, dazu 1955 den vielversprechenden Stirling Moss – ein schier unschlagbares Duo.

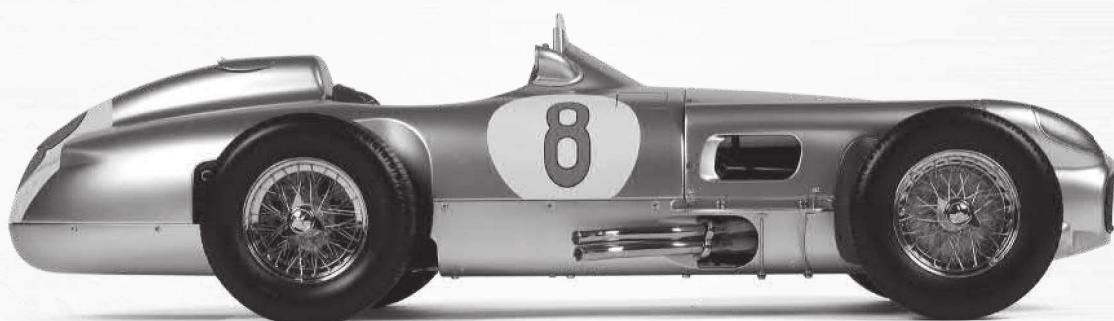

Die Bilanz des W 196 R: neun Siege und schnellste Runden sowie acht Pole-Positions in den zwölf Grand Prix, an denen er teilnimmt, sowie die beiden Fahrertitel 1954 und 1955 für Fangio. Viel besser geht's nicht.

nouvel essieu oscillant à un seul joint à l'arrière ainsi que les freins à tambour duplex géants, turbo-cooling et d'abord disposés centralement, étaient exceptionnellement bons. Le moteur à huit cylindres en ligne à injection directe et commande de soupape desmodromique (1954: 256 ch (188 kW) à 8260 tr/min, 1955: 290 ch (213 kW) à 8500 tr/min) a été monté dans le cadre spatial à un angle de 53 degrés vers la droite pour abaisser le centre de gravité et réduire la zone frontale. En outre, les préparatifs méticuleux pour chaque course individuelle rappelaient les glorieuses années 1930 tout en anticipant l'approche moderne de la Formule Un. Mais il y avait aussi autre chose : pour que les meilleures voitures du monde soient conduites par les meilleurs pilotes, le directeur de course Alfred Neubauer a embauché la superstar Juan Manuel Fangio, qui était réticent au début, ainsi que le prometteur Stirling Moss en 1955 – un duo pratiquement invincible.

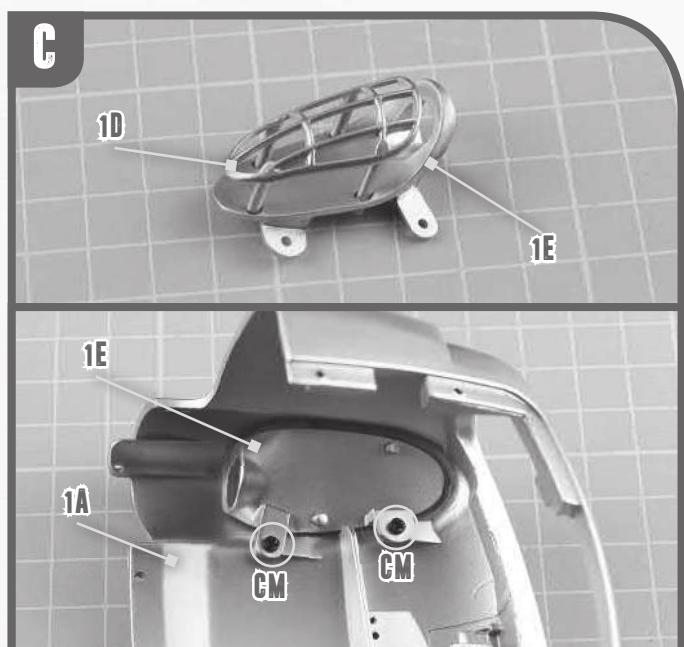

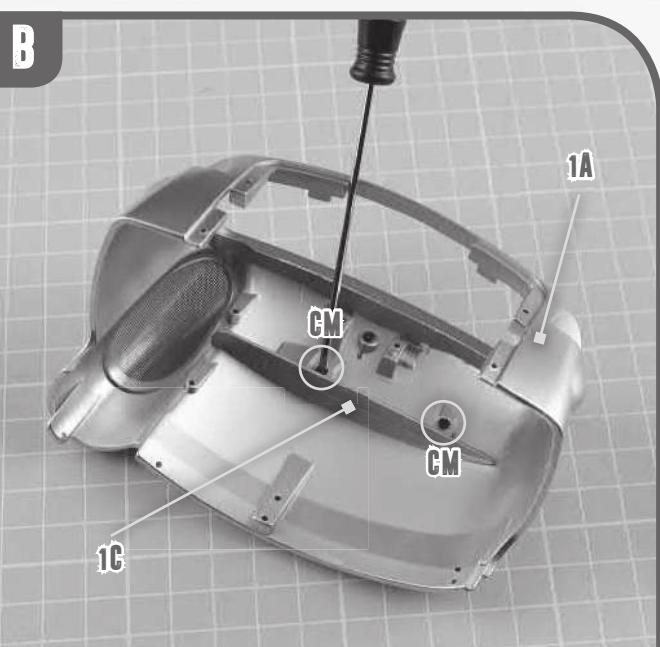

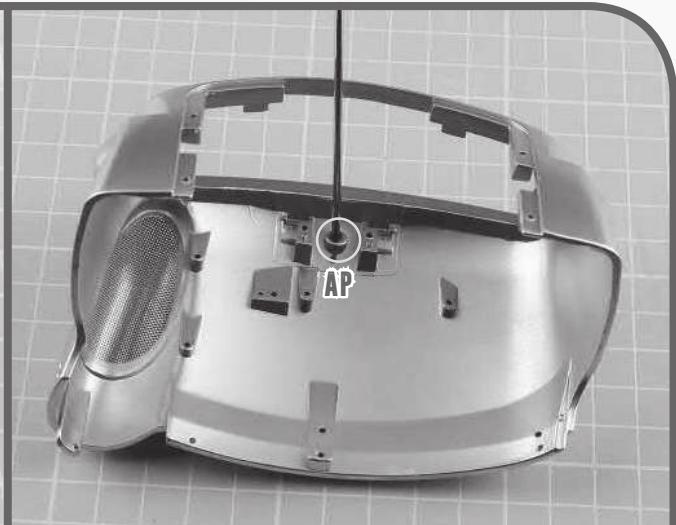

Le palmarès de la W 196 R est vraiment impressionnant : neuf victoires et les tours les plus rapides, ainsi que huit pole positions dans les douze courses de Grand Prix auxquelles elle a participé, et, bien sûr, les titres de champion du monde de Fangio en 1954 et 1955. On ne pouvait guère faire mieux !
